Fleet tracking within the industrial manufacturing industry

Customer Profile

One of largest Industrial Manufacturer in Bahrain producing goods in large quantities to rest of the world. They use Tankers to move their products from station to another non stop around the clock. One of their most important values are safety.

Customer Requirements

- Fleet Tracking and Speed Violation Reporting
- To identify the weight of loads
- Identify number of loads per day

Business Results

Customer was able to have visibility of each tanker load and the number of loads completed per day. They are also alerted when any tanker violates the speed limits.

Challenges

Inability to read the amount of goods in the tankers and they usually have to count the number of times a tanker loads or offloads.

Tankers Violating the speed limits of the private roads is a safety risk they wanted to overcome.

Customer Benefits

The Customer have been able to set new safety standards by being constantly focused on safety by achieving the targeted work hours without a single Lost Time Injury (LTI) in 2020, strengthening its reputation as one of the safest Industrial Manufacturer in the world.
